SLOW FOOD CLUB

We intend to promote sustainable agriculture, food culture, and to provide an environment which allows SUA students access to local, organic, and seasonal foods. We shall serve as a resource for the campus population and surrounding neighborhoods and become an inspiration for change in the direction of sustainable food culture in the school and around the world as part of Slow Food International.

2010 Spring Semester Goals

1. To get a composting program on campus and to raise awareness of food issues in the campus community.
